

Counter March

The command for this movement is ***Counter*, MARCH**. The preparatory command is given as the right foot strikes the marching surface, and the command of execution is given the next time the right foot strikes the marching surface. On the command of execution **MARCH**, each element goes into a half step and executes a double right flank in column by the element. This inverts the elements which can be reformed by another counter movement. As the members begin to march in the new direction, they glance out of the corner of their right eye to maintain a proper line as they return to quick time cadence.
